

CSH6 Ch 29 (Biometrics) Review Questions

1. Face recognition is an example of a technique used in ____
2. What is the term for determining who someone claims to be?
3. What is the term for determining if someone is who they claim to be?
4. What is the requirement that a biometric characteristic be measurable called?
5. Problems with hand-geometry scanning systems include ____
6. Hand-geometry scanning is an example of a technique used in ____
7. What is the term for binding an identifier (e.g., a userID) to a specific entity (e.g., a person)?
8. Identification and authentication based on the measurement and matching of physiological or behavioral characteristics is known as ____
9. Retinal scanning is an example of a technique used in ____
10. Which biometric technology has the highest error rate of all the techniques discussed in the CSH chapter on biometric authentication?
11. Keystroke dynamics analysis is an example of a technique used in ____
12. Significant advantages of biometric authentication include ____
13. Which biometric technology has the lowest error rate of all the techniques discussed in the CSH chapter on biometric authentication?
14. Voice-print recognition is an example a technique used in ____
15. Which of the following is/are (a) feature of finger scanning biometrics?
16. Which of the following is the currently most widely deployed biometric technology according to your textbook?
17. What is the requirement that every person should have a biometric characteristic called?
18. Hand-geometry scanning benefits include ____
19. Which of the following is/are (a) requirement(s) for biometric authentication?
20. What is the requirement that a biometric be relatively invariant over the long term called?
21. Fingerprint scanning is an example of a technique used in ____
22. What is the requirement that no two persons should have the same biometric characteristic called?
