1 Introduction

With the growing visibility of information security in today's hacker-beset e-commerce world, many people are becoming interested in careers as information security specialists. All indications are that there aren't enough people with security knowledge and skills to fill all the open positions; as a result, salaries have been rising steadily in the industry. This article looks at some frequently-asked questions and provides pointers for knowledge-hungry readers. Readers should note that (1) these questions are not necessarily quoted from specific people – some are amalgams of queries from different people; (2) opinions in this article do not represent endorsement by the author's employer or associated institutions; (3) exclusion does not imply criticism – I had to stop somewhere. I begin by combining several articles published in the *Network World Security Strategies* newsletter < <http://www.networkworld.com/newsletters/sec/> > dealing with how to study for the CISSP exam and then append questions sometimes asked of security experts by students, amateurs and children.

2 Studying for the CISSP Exam

A former student recently wrote to me with a request for suggestions on what to read in preparing for the CISSP exam. I decided to answer him by writing an essay that readers of this column who are thinking about the exam could also use.

2.1 Basic Approach

The key to passing the CISSP exam, in my opinion, is daily attention to expanding one's exposure to interesting and thought-provoking information and ideas in the field. As you know from my constant reiteration of the point in our classes at Norwich, I have nothing but contempt for cramming – it is not possible to remember what is learned in a rush for very long. Indeed, I teach all my students to use SQ3R (Survey/Question, Read/Recite, Review) a well-established study method that pays off with long-term integration and retention of knowledge. Readers may want to use my one-page summary, available from my Web site in HTML < <http://www2.norwich.edu/mkabay/methodology/sq3r.htm> > and in PDF < <http://www2.norwich.edu/mkabay/methodology/sq3r.pdf> >.

Anyone committed to professionalism should read a wide range of reputable publications and participate in serious discussion groups.

2.2 Newsletters

Some of my favorite electronic newsletters are the following:

Computerworld Newsletters

<http://www.computerworld.com/action/member.do?command=registerNewsletters>

Disaster Recovery

Security

Infrastructure & Control

Security: Issues and Trends

Virus and Vulnerability Roundup

“CRYPTO-GRAM” from Bruce Schneier

<http://www.schneier.com/crypto-gram.html>

“DHS Daily Open Source Infrastructure Report” from the US Department of Homeland Security

<http://www.dhs.gov/infrastructuredailyreport>

“EFFector” from the Electronic Frontier Foundation

<http://www.eff.org/effector/>

“EPIC Alert” from the Electronic Privacy Information Center

<http://www.epic.org/alert/>

Network World Newsletters

Identity Management

<http://www.networkworld.com/newsletters/dir/index.html>

Access Control

<http://www.networkworld.com/newsletters/vpn/index.html>

“TTL Computer Security Bulletins” from the National Institute of Standards and Technology Information Technology Laboratory Computer Security Division’s Computer Security Resource Center

<http://csrc.nist.gov/publications/nistbul/index.html>

“RISKS DIGEST” from the Association for Computing Machinery Committee on Computers and Public Policy

<http://catless.ncl.ac.uk/Risks/>

SANS Newsletters <http://www.sans.org/newsletters/?ref=1701>

“@RISK: The Consensus Security Vulnerability Alert”

“NewsBites”

ZDNet UK newsletters <http://community.zdnet.co.uk/account/manage.htm>

“IT Whitepapers”

“Security”

2.3 Web Sites

The National Institute of Standards and Technology Information Technology Laboratory Computer Security Division’s Computer Security Resource Center (I guess that would be the NIST ITL CSD CSRC – whew!) has a several good resources for CISSP review.

First, the NIST Special Publications (SP) page < <http://csrc.nist.gov/publications/nistpubs/index.html> > has a wealth of valuable papers for anyone interested in reviewing and extending security knowledge – especially security-management knowledge. I have reviewed many of these documents in the *Network World Security Strategies* column will be reviewing new ones in future columns.

A related page is the NIST ITL CSD CSRC Draft Publications list < <http://csrc.nist.gov/publications/drafts.html> > which offers even more recent documents plus the opportunity for CISSP-preparers to apply their analytical skills to improving proposed documents. Some of the drafts are also linked from the previously-mentioned SP page, but on the draft page each is described in a one-paragraph summary that includes the deadlines for comments.

Even if CISSP candidates are not currently working in the US federal government, they would do well to read many of the Federal Information Processing Standards (FIPS) available from the NIST ITL CSD CSRC < <http://csrc.nist.gov/publications/fips/index.html> >. In particular, I draw your attention to the more recent documents such as

- 2001-05 FIPS 140-2 Security requirements for Cryptographic Modules
- 2006-03 FIPS 201-1 Personal Identity Verification (PIV) of Federal Employees and Contractors
- 2001-11 FIPS 197 Advanced Encryption Standard
- 2002-03 FIPS 198 The Keyed-Hash Message Authentication Code (HMAC)
- 2002-08 FIPS 180-2 August 2002, Secure Hash Standard (SHS)
- 2004-02 FIPS 199 Standards for Security Categorization of Federal Information and Information Systems
- 2006-03 FIPS 200 Minimum Security Requirements for Federal Information and Information Systems.

A collection of interesting white papers on security-related topics is maintained by Entrust < <http://www.entrust.com/resources/whitepapers.cfm> >. At latest count, there are 110 papers freely available from that source (some of them in German) without having to sign up for anything. Some of the ones I recommend:

- AITTE Online Banking Security: FFIEC Deployment Experiences
- An Introduction to Cryptography and Digital Signatures v2.0
- Authentication: The Cornerstone of Secure Identity Management
- Best Practices for Choosing a Content Control Solution

- Common Criteria Evaluation
- Countering On-Line Identity Theft: New Tools to help Battle Identity Theft on the Internet
- Did security go out the door with your mobile workforce?
- Enhanced Online Banking Security - Behavioral Multi-Factor Authentication
- Entrust Internet Security Survey - European Survey Overview and Report Methodology
- GIGA Report: Total Economic Impact of Entrust TruePass and Token-based Authentication
- Information Security Governance: Toward a Framework for Action (BSA white paper)
- Myths and Realities in Content Control for Compliance
- Protecting Information on Laptops and Mobile Devices
- Quantum Computing and Quantum Cryptography
- Security In A Web Services World
- Trends in Outbound Content Control: A White Paper by Ferris Research
- Trusted Public-Key Infrastructures
- Understanding Secure Sockets Layer (SSL): A Fundamental Requirement For Internet Transactions
- Using a PKI Based Upon Elliptic Curve Cryptography
- Web Portal Security Solution
- Web-Services Security Quality of Protection.

2.4 CCCure.org

In my last two sections, I began responding to a former student recently who wrote to me with a request for suggestions on what to read in preparing for the CISSP exam. In this third section, I am recommending a Web site run by an old friend and colleague whom I have never met in person: the CCCure.Org site run by Clément & Nathalie Dupuis. < <http://www.cccure.org> > The site is so rich in resources I decided to devote an entire section to it alone.

The Web site started in 2001 when Clément was working in Montréal, Canada after a 20-year career in military communications and security in the Canadian Army. He was certified as a CISSP in 1999 (and mentions taking courses from some other old friends of mine, Hal Tipton and Sandy Sherizen, who is now a much-appreciated Adjunct Professor in the MSIA program at Norwich). Clément and his friend Chris Hare decided to create study guides for several of the domains from the Common Body of Knowledge (CBK) < <https://www.isc2.org/cgi/content.cgi?category=8> > and then put them on the Web for anyone to use. That was the birth of what became CCCURE.ORG. It became so popular that it was kicked off several hosting sites because it generated too much traffic for a free service. Clément and his wife Nathalie, a mechanical engineer who became an expert in programming and networking, had to convert it into a commercial venture. However, in addition to monetary contributions by a few carefully-selected advertisers, it is supported by the work and enthusiasm of thousands of volunteers, including me! For more about the history and philosophy of CCCure.Org, see < <http://www.cccure.org/modules.php?name=News&file=article&sid=397> >.

The CCCure home page is huge. There's plenty of material there for anyone to soak up lots of interesting knowledge and ideas and to contribute their insights. However, there are some special links that will be particularly valuable for CISSP candidates.

The Flash Tutorial explains exactly how to use the narrated slide-shows used in the tutorials on the site. Then there's a narrated CISSP Exam Preparation and Overview with 57 slides and the following major sections:

- Visit the ISC2 web site
- Certification Benefits
- The dreaded exam
- Build your study plan
- The 10 Domains
- Study Books
- Study what you need to study
- The Final Stretch
- Post Exam Syndrome
- Help!! Where do I go?
- Pass or Fail (no in between)
- Maintaining your certification
- If you have any questions.

The Quizzes section has a wonderful review tool that generates questions for several certifications including the CISSP; you can choose the domain(s), topics, difficulty level, whether to include related questions, and the number of questions. The quiz generator creates a unique, randomized quiz on every iteration. It's a wonderful tool because it forces active recall and application of the knowledge you are trying to consolidate. Indeed, a recent article in *_ScienceNow_* from the American Association for the Advancement of Science indicates that testing improves retention not only of the material tested but of other information being learned at the time of the test (full article < <http://sciencenow.sciencemag.org/cgi/content/full/2006/1113/2> > requires subscription; portion of article available at < http://3quarksdaily.blogs.com/3quarksdaily/2006/11/testing_boosts_.html >).

The site features a list of suggested readings and a forum where participants can engage in spirited discussion of technical issues relating to their exam preparation.

This is a real treasure. Merci bien, Clément et Nathalie!

2.5 Books and Free Review Materials

In this fourth and last section, I suggest a few valuable (albeit sometimes expensive) books and some (free) review materials for such preparation. Readers will find other lists of suggested readings on the Web by using search string “CISSP preparation course” in a Web search engine.

In my opinion, some of the most useful books for overall coverage of the field are as follows:

- *The _Official (ISC)² Guide to the CISSP® Exam* by Susan Hansche, CISSP, John Berti, CISSP and Chris Hare, CISSP (ISBN: 0-8493-1707-X) is available from the (ISC)² Company Store < <http://tinyurl.com/yq6zl> >.
- *Information Security Management Handbook on CD-ROM, 2006 Edition* (a classic in the field) by Harold F. Tipton & Micki Krause < <http://tinyurl.com/create.php> >
- *Handbook of Information Security*, 3-Volume Set (I chose this as the new textbook for our Master’s program at Norwich University) by Hossein Bidgoli < <http://tinyurl.com/yf2549> > (get your company to buy it for their library). I reviewed this enormous work in this column a year ago. < <http://www.networkworld.com/newsletters/sec/2006/0410sec2.html> >
- *Computer Security Handbook, 4th Edition* by Seymour Bosworth & M. E. Kabay < <http://tinyurl.com/yf4lsv> > (of course, I’m biased). Most people refer to this as the “CSH4.”

In addition, the (ISC)² provides a slightly disorganized list of books at < <https://www.isc2.org/cgi-bin/content.cgi?category=698> >. For some reason it refers to the 3rd edition of the CSH (twice) but not to the CSH4.

Ideally, people preparing for any exam do best if they can study in teams. For example, they can use my own lecture slides as review material to quiz each other – they should be able to speak intelligently about every point on every slide. The files thus serve as one of the ways to check for holes in coverage of the material and also as a way of consolidating and strengthening knowledge.

- I340 Intro to IA lectures (last updated Fall 2005) < <http://tinyurl.com/yddeo3> > covers the first half of the CSH4.
- IS342 Management of IA (last updated Spring 2006) < <http://tinyurl.com/csymbh> >. As you would expect, this course covers the second half of the CSH4.
- CJ341 Cybercrime & Cyberlaw (last updated Fall 2006) < <http://tinyurl.com/yzgts8> > is a mind-numbingly detailed look at how law enforcement has to deal with digital evidence, including the specific laws relating to computer crimes of all sorts. Personally, I love it, but I know that some people find it dry. Still, “Legal, Regulations, Compliance and Investigations” is one of the 10 domains of the CBK (Common Body of Knowledge) for the CISSP < <https://www.isc2.org/cgi/content.cgi?category=8> >.

In addition to all of this (mostly) free knowledge, it is also possible to enroll in a wide range of preparatory courses. I myself have taught for the (ISC)² and think their courses are good reviews. I am leery, however, of taking a short course _instead_ of reading and thinking for a long time about any subject beyond the purely technical. In my experience, the most important aspect of learning is thinking, not memory. Take a course if you like, but not just before your exam. Use the course as a form of review and verification – a tool for strengthening what you already know but above all for identifying what you have to think and learn about at greater length.

And good luck to all in your certification exams!

3 Q: “I’ve been using computers since I was a two and have been hacking into systems ever since I was eight. I’m thirteen now. How can I earn a living hacking?”

Sorry, but you’re asking the wrong question, son. Information security is *not* primarily about hacking. Penetration testing and technical vulnerability analysis are tools, not goals, of information security professionals. Contrary to the myths perpetuated by criminal hackers, learning to hack into other people’s systems without permission is *not* a sound approach to becoming such a professional. Information security is about protecting confidentiality, possession or control, integrity, authenticity, availability and utility of information and information systems. If you’d like to find out more about the foundations of security, read “Why Kids Shouldn’t Be Criminal Hackers” http://www2.norwich.edu/mkabay/ethics/kids_not_hack.htm which is aimed at young people (and their parents and teachers) or anyone interested in finding out what information security is really about.

Some young people are trying to make a living through theft, fraud and extortion; they are stealing credit-card numbers, engaging in pump-and-dump stock fraud, and threatening to reveal stolen information unless they are paid by their victims. Increasingly, victims are turning to law enforcement to find the perpetrators of such crimes, and the victimizers are being caught, tried and sentenced. Nobody with any sense will advise a kid to become a criminal, so be suspicious of the people you meet at hacker meetings and conventions when they pretend that criminal hacking will give you a bright future.

Security today involves a wide range of challenges including a grasp of business and management issues, good interpersonal skills, and a thorough grounding in the technology of computing and networking. Although the media celebrate notorious criminal hackers such as Kevin Mitnick, and although some companies even hire hackers (convicted or not) with a limited grasp of professional ethics, by far the majority of people involved in securing computers and networks are honest folk who have never used other people’s computing resources without permission.

You will be able to earn a living using your computing skills, including perhaps working in penetration analysis, by reading widely, getting a solid education with plenty of technology courses but also lots of humanities courses too, and by focusing on how you can help people protect their privacy and prevent damage from intruders or malicious software. If you decide to join the military, you can aim for the technically-demanding positions and maybe get involved in information warfare studies and practice.

You want to be a successful human being who works in security? Get involved in all kinds of good activities; make friends with a wide variety of people; keep up with (or get ahead of) your schoolwork; learn to read and write quickly and well; read about computers and security; and most of all, learn to think both critically and with imagination. Then you can be whatever you want to be – including a security expert, if that’s what you decide on.

4 Q: “I’ve seen some neat videos like *War Games*, *Sneakers*, *The Net* and *The Matrix* and I really like computers. I’m fifteen now and I think I’d like to learn more about information security and see if I’d be interested in pursuing this as a career.”

Movies don’t have very much to do with reality. Contrary to the images you see, computers don’t normally have banks of tape drives moving back and forth continuously, nor do programs written for PCs run equally well on mainframes (or, for that matter, on computers running alien spaceships). Criminal hackers don’t necessarily live in palatial apartments, have state-of-the-art computers, or consort with nifty friends wearing scanty clothing. But you can certainly learn a lot about computers and security at your age. Appendix 1 is a list of some entertaining URLs and books that will give you a sense of what’s involved in security and get you into reading more serious books if you remain interested.

5 Q: “I’m just beginning my university education and I think I would like to work in the information security field some day. What courses should I take?”

In general, a computer science or management information systems degree with as many security courses as were offered plus extensive reading will help you get a job in information security when you graduate. There are so few people interested in the field that we are much in demand.

Ideally, you would develop a strong background in computer science, engineering and other “hard” disciplines. The obvious choices for training include (but are not limited to) logic, programming, operating systems, data structures, quality assurance, cryptography, data communications, information systems management and other information security courses that are offered by your school or by nearby schools (find out about away terms). You will also find courses in probability and statistics, psychology, English, at least one foreign language, philosophy, ethics, and history valuable in general in life and in particular in security.

Many contributors to information security have law degrees; because of widespread public concern about privacy, many attorneys are deeply involved in privacy issues.

A wide range of experience can stimulate you to come up with novel solutions to problems you will encounter in your security career; the “soft” courses (history, etc.) will give you perspectives that will help you understand people’s motivations and the social factors that influence behavior – and understanding and modifying human behavior is one of the core concerns of security today.

You can usually discuss assignments with your teachers and see if you can work in some element of information systems or information security into your projects. For example, you might put together interesting term papers on, say, the history of cryptography, social psychology and corporate culture change, or ethical reasoning among members of the local criminal-hackers’ club. In your programming courses, perhaps your projects can involve cryptography and cryptanalysis; in your networking classes, perhaps you can write a paper on, say, public-key infrastructure. Your operating-systems theory course can give you a chance to study the security kernel of various OSs in more detail than the lectures provide.

6 Q: “After five years in the US Air Force, I took advanced courses in computing when I went to university and then took a masters degree in computer science (I worked on artificial-intelligence systems). Later I worked in a manufacturing company doing real-time process control and then moved to a hospital where I helped design a medical-records system. In my current job, I’m doing project management for a group developing a wireless network application for the construction industry. I enjoy your magazine and find that whenever security is mentioned I seem to get interested and excited about it; is it too late for me to move into information security as a career?”

A: Not at all. An individual’s wide experience, such as yours, is a good start for a productive shift into informational security. One of the dynamic aspects of INFOSEC that makes practitioners so interesting is our diversity. This is also true of how an individual can approach their pathway to learning; creativity in how one approaches learning can help tremendously and offer great rewards.

Many security experts begin their careers in the military by volunteering or applying for training and positions in SIGINT, INTEL, COINTEL, PSYOPS and military police. Other individuals pursue internships locally, as was the case with one of the authors (PSH). In this particular instance, Holt spent eight months as a member of the security group at large Internet service provider. This experience was rewarding and served as a solid stepping stone into INFOSEC. Some take on security responsibilities as part of system and network operations or management; others come from the administrative side rather than the technical side. Kabay, for example, began working with security issues when he was involved in systems engineering for Hewlett-Packard in 1980 and then had to apply his knowledge when he ran technical support at a large computer-services bureau. Many security personnel have extensive backgrounds in Unix, Windows or mainframe-based systems administration; some also have years of experience in information-systems consulting. Such experiences lay a solid foundation on which the INFOSEC specialist can build a comprehensive set of tools and real-life working experience.

7 Q: “I’ve been working with computers as an operator, a programmer and a network administrator for the last ten years. Lately I’ve been helping more and more with the security functions and I’m getting interested in concentrating in this area. Can I read up about the subject to improve my technical knowledge and skills?”

Definitely. You can always search the online booksellers (e.g., <http://www.amazon.com> or <http://www.bn.com>) for keywords of interest. Appendix 2 is a list of some more advanced books that I recommend; some of the older ones are out of date but may be available in your local public or academic libraries or from booksellers specializing in remainders.

8 Q: “I need to know more about securing our LAN, our Web site and our e-commerce business. Are there any on-line or CD-ROM courses I could take to increase my knowledge of information security in general?”

There certainly are. Appendix 3 lists a number of courses and videos of value for trainers and training.

9 Q: “What about courses on securing our operating and network systems in particular? Or about specific firewalls, intrusion-detection systems and access-control products?”

Your best bet is to go to the Web site run by each vendor. Many vendors have decreased their technical support costs by providing computer- or Web-based training modules for their specific products. In addition, major training vendors often include platform- or product-specific live training in their offerings. Finally, some conferences include platform-specific training among the workshops and seminars. See also the *Step-by-Step Guides* from SANS <http://www.sans.org/newlook/publications/index.htm> for information on Windows NT, Solaris and Linux security.

10 Q: “Could you recommend some good live classes we could send our staff to so they can improve their information security skills?”

There are lots of possibilities. Some involve local colleges and universities; others are presented by various companies and institutes. In addition to regularly-scheduled classes from training groups, there are often excellent one- or two-day workshops associated with conferences. Several of the organizations listed in Appendix 4 can bring their courses to your site to save travel expenses; you’ll have to look at the costs of in-house training to determine the break-even number of participants.

11 Q: Are there any associations I could join to help me progress towards my goal of becoming an information security specialist?

Indeed, and participating in professional organizations is an excellent and inexpensive way of furthering your information security interests. Many of these organizations have regular (often monthly) meetings at modest cost (often in the \$25 range) and usually have several dozen to a hundred participants. This intimacy offers a great opportunity to get to know your colleagues (or future colleagues) and to ask questions, learn from their experience, and get friendly guidance and pointers from more experienced security professionals. Another way of learning is to write newsletter articles or to present lectures on specific topics – organizing knowledge so you can help colleagues learn is an excellent way of acquiring and consolidating your own knowledge.

Some of the key associations are listed in Appendix 5.

12 Q: “Ever since I signed up to receive your magazine, I keep getting all sorts of fliers about conferences. Some of my co-workers tell me conferences are a waste of time and that all you hear is a bunch of salespeople talking about how great their products are. Do you think there’s any point in going to security conferences?”

Oh definitely. Conferences provide an incredible value for the money, since you can pick lectures, workshops and even entire courses to meet your specific needs. But most important is the mental stimulation you can derive from listening to world-famous experts telling you about the latest issues they, their colleagues, their clients and *you* are facing in various facets of security.

Take advantage of the introduction sessions offered at many conferences; you will learn to make the best possible use of your time by knowing how to interpret the conference catalog, take advantage

of special events, and make your way around the facilities – which are sometimes so huge as to be intimidating to novices.

As for salespeople, you will meet many excellent product representatives in the associated floor shows at many conferences; don't sneer at these people: they can be very useful to you by answering specific product-related questions. Many of them are at least as knowledgeable as their clients. Take advantage of the product displays; you can often save a great deal of time when you are shopping for possible solutions, and even if you're not, you may get some ideas that can help you solve some of the practical problems you and your colleagues are facing in your work.

13 Q: “Which security conferences do you think are worth going to?”

Which type of hand-tool do you think is worth having? Can't answer that, eh? You need to specify *for what* whenever you try to decide among tools – and conferences. Some conferences cater to technical specialists interested in securing particular platforms; others to security experts wishing to exchange the most recent research results. Some are of general interest to all security experts. Appendix 6 is a short list of some of the top events.

14 Q: “I left college half-way through twenty years ago because I got married and had a baby. I always wanted to finish my degree – I always got really good grades -- but felt I also wanted to stay home for my daughter. Now, though, my husband and I have decided that it's the right time for me to go back to university and finish my degree. My husband telecommutes and is really supportive, so we can move anywhere we like in the USA. I know I want to work in the information security field, so can you tell me where I could get a degree in the subject?”

In alphabetical order, Appendix 7 provides some brief descriptions of major colleges and university centers offering degrees with specialization in information security. The asterisks (*) indicate *Centers Of Academic Excellence In Information Assurance Education* designated by the US National Security Agency (NSA); see <http://www.nsa.gov/isso/programs/coeiae/index.htm> for details of the National INFOSEC Education and Training Program (NIETP).

15 Q: “Are there information security programs outside the USA? I live in England / Europe / Asia / Australia and would like to pursue a degree in INFOSEC.”

Yes, there are several recognized centers of information security education you should consider. However, before deciding to take advanced training abroad, it is wise for US students to check with the institutions where they intend to study or work after their foreign study to see if foreign academic credentials will be accepted. Appendix 8 is a short list of some non-US options.

- 16 Q: “I used to be what you keep referring to as a criminal hacker, although I have never thought of myself as a criminal. I’ve already been turned down by several firms who found out that I was convicted of hacking under the Computer Fraud and Abuse Act (18 U.S.C. §1030). How can I convince these idiots that it’s over now and that I’d make a great employee?”**

Well first you might lose the nasty attitude. If you penetrated other people’s systems without permission then you *were* engaging in criminal activity, and your conviction simply confirmed that you *were* a criminal. Calling people idiots is hardly the way to convince anyone that you have changed your mind about the wisdom of violating the law – and normal rules of civility. Yes, some criminals can truly change; others can’t. It’s going to be a challenge for you to demonstrate that you don’t intend to betray your employers and your clients in the same ways that you betrayed others in your youth. Being honest about your past is a first step. Abandoning your pride in hacker handles is another; I recall a candidate for a job in a security firm who refused to agree to stop writing under his hacker name and insisted that he had the right to continue participating in criminal-hacker conferences and news groups. He certainly had the right, but the firm also had the right to refuse to hire him.

- 17 Q: “How do you suggest that I keep up with developments in the field of information security?”**

Paper publications not only have useful technical articles, they also often include news summaries, industry news, and useful advertisements. In addition, there are hundreds of security-related USENET groups; however, unmoderated lists have such low signal-to-noise ratios (the average signal-to-noise in specific news groups sometimes falls as low as 5%) that interested readers should find out about them and evaluate them for themselves.

Appendix 9 lists some useful INFOSEC publications, both paper and electronic.

- 18 Q: “I’ve seen people like you put letters after their names like CISSP and CISA. What do they mean and what good are they?”**

Certification is a useful milestone in professional development. It tells colleagues and potential employers that you take your profession seriously and are willing to abide by the code of professional ethics associated with each designation. Visit <https://www.isc2.org/> for information about the (ISC)² designations. Appendix 10 has links to several certifying agencies.

Appendix 3. INFOSEC Learning Aids on CDs, Videos and on the Web

- The CISSP Open Study Guide (OSG) <http://www.cccure.org/> is a new collaborative project offering online documentation to help people study for certification as CISSPs (Certified Information Systems Security Professionals).
- Commonwealth Films <http://www.commonwealthfilms.com/home.htm> makes superb training videos about information and computer security, communication, records, software, workplace laws, sexual harassment, antitrust compliance, depositions, discovery, defense, and compliance with regulatory laws.
- “Dataware™ is an online mini-course that contains the most current and essential elements necessary in order to practice prudent data security, to help avoid security errors and proactively protect a company’s information.” The Web-based course costs \$1 a seat and up and full information is at <http://www.itsecurity.com/products/prod311.htm>
- George Mason University’s Hyperlearning Center <http://cne.gmu.edu/> includes many valuable free Web-based courses; the course called “The Core of Information Technology” <http://cne.gmu.edu/modules/itcore/> has modules on security at <http://cne.gmu.edu/itcore/security/> that cover fundamentals, authentication, encryption, exchange transactions in e-commerce, and digital signatures.
- Organisational [sic] Communications: Security Procedures. This UK course is described as follows: “Your first few days or even weeks in a company can be a confusing time. You have to learn a lot about the company itself: how it operates, your role and what’s expected of you. This course will help you to understand the importance of confidentiality and security in your workplace. It examines what can be stolen from an organisation and what you can do to prevent it. It also outlines ways of protecting the confidential information held electronically by organisations.” The full description is available at http://www.xebec-online.com/uk/online/ipages/orgcomms/securityprocedures_enuk.html and information about Xebec Online is at <http://www.xebec-online.com/uk/online/online2.htm>
- The US National Institutes of Health (NIH) has a Computer Security Awareness Training Web page free for anyone at <http://www.oirm.nih.gov/sectrain/>
- Purdue University’s CERIAS (Center for Education and Research in Information Assurance and Security) <http://www.cerias.purdue.edu/> offers free security seminars that are Web-cast in real-time from Lafayette, Indiana from 16:30 - 18:00 (4:30 PM – 6:00 PM) Eastern Time Wednesdays; see <http://www.cerias.purdue.edu/secsem/streaming.php> for instructions and links to the schedule of upcoming presentations.
- The System Administration and Network Security (SANS) Institute has a wide range of courses offered at its conferences; see <http://www.sans.org/giactc.htm> for the home page of the Global Incident Analysis Center (GIAC), where there are pointers to three levels of courses of increasing depth. The first two levels include courses that are available for Web-

based training. See also the home page, <http://www.sans.org/newlook/home.htm> for more pointers to SANS online training courses.

WISE (Web-based Internet Security Education)

<http://www.infosec.spectria.com/products/wise.htm> from Rainbow Technologies includes courses on information security basics, PC & LAN security, Internet security, system server security, database security and preparation for the CISSP exam. The same organization offers a systematic approach to security awareness employees called SAFE (Security Awareness for All Employees) <http://www.infosec.spectria.com/products/safe.htm>

Appendix 4. Some Live INFOSEC Courses.

- Avi Rubin has an extensive list of college security courses in the USA and the rest of the world; it is at <http://avirubin.com/courses.html> and if you live near one of the academic institutions listed you can look into having your staff participate. Typically such courses are not expensive by industry standards.
- Computer Emergency Response Team Coordination Center (CERT-CC) offers courses; see the home page <http://www.cert.org> for links to upcoming sessions.
- The Computer Security Institute (CSI) has a catalog of its excellent live courses at <http://www.gocsi.com/csi2001.pdf> and also offers generous discounts for multiple courses or multiple people in the same course.
- DCI <http://www.dci.com/> offer a wide range of IT courses and symposia including a dozen dealing with security topics.
- The (ISC)² (International Information Systems Security Certification Consortium) offers preparatory courses that can help bring staff up to speed on security issues; see
- The MIS Training Institute <http://www.misti.com> offers its courses not only at its conferences but also on-site for groups of employees.
- SANS, described in the section just above, has individual courses you can use for your staff. See <http://www.sans.org/newlook/home.htm>

Appendix 5. Key INFOSEC Associations, Trade Groups, Government Agencies and Other Organizations

- American Health Information Management Association (AHIMA) <http://www.ahima.org/> has valuable information about privacy issues in medical informatics.
- American Society for Industrial Security (ASIS) <http://www.asisonline.org/> has an active information security program including Cybercrime conferences.
- Applied Computers Security Associates (ACSA) <http://www.acsac.org/>
- Association for Computing Machinery (ACM) Special Interest Group – Security, Audit and Control (SIGSAC) <http://www.acm.org/sigsac/> has a newsletter and an annual conference
- Association of Certified Fraud Examiners (ACFE), www.acfe.org
- British Standards Institute originated the BS7799 guidelines that became the ISO 17799; see <http://www.bsi-global.com/index.xalter#> for links to INFOSEC standards.
- Center for Education and Research in Information Assurance and Security (CERIAS) at Purdue University “is the world's foremost University center for multidisciplinary research and education in areas of information security. Our areas of research include computer, network, and communications security as well as information assurance.” See <http://www.cerias.purdue.edu/>
- Center for Internet Security (CIS) <http://www.cisecurity.org/> “is a not-for-profit cooperative enterprise that helps organizations reduce the risk of business and e-commerce disruptions resulting from inadequate security configurations. CIS members are developing and propagating the widespread application of Security Benchmarks through a global consensus process that brings together industry, government, academia and consultants. CIS Benchmarks enumerate the "When, Why, and How" aspects of technical security configurations across a wide range of operating system platforms and Internet software applications.”
- Common Vulnerabilities and Exposures (CVE) database, run by MITRE Corporation, has an extensive listing of all documented vulnerabilities; for information see <http://cve.mitre.org/> and for an indispensable interface to the CVE, see the ICAT Metabase at <http://icat.nist.gov/icat.cfm> from NIST.
- Computer Emergency Response Team Coordination Center (CERT®/CC) is a central resource for everyone interested in information security at <http://www.cert.org>
- Computer Incident Advisory Capability (CIAC) serves the US Department of Energy but is open to the public at <http://ciac.llnl.gov/ciac/CIACHome.html>

- Disaster Recovery Institute International (DRII), www.drii.org
- European Institute for Computer Antivirus Research (EICAR) has an active Web site <http://www.eicar.org/> and annual meetings. EICAR is open for volunteers in Europe and around the world.
- Federal Bureau of Investigation (FBI)
- Federal Information Systems Security Educators Association (FISSEA) <http://csrc.nist.gov/organizations/fissea.html> caters primarily to “information systems security professionals, trainers, educators, and managers who are responsible for information systems security training programs in [US] federal agencies” but the association is also open to “contractors of these agencies and faculty members of accredited educational institutions.”
- Forum of Incident Response and Security Teams (FIRST) “brings together a variety of computer security incident response teams from government, commercial, and academic organizations. FIRST aims to foster cooperation and coordination in incident prevention, to prompt rapid reaction to incidents, and to promote information sharing among members and the community at large. Currently FIRST has more than 100 members.” See <http://www.first.org/>
- Forum on Privacy and Security In Healthcare (FPSH) <http://www.healthcaresecurity.org/> is useful for anyone interested in their core subject.
- Georgia Tech Information Security Center (GTISC) at <http://www.gtisc.gatech.edu/>
- High Technology Crime Investigation Association (HTCIA) <http://htcia.org/> is an international organization with many regional chapters. HTCIA “is designed to encourage, promote, aid and effect the voluntary interchange of data, information, experience, ideas and knowledge about methods, processes, and techniques relating to investigations and security in advanced technologies among its membership.” HTCIA chapters often collaborate with ISSA chapters to host joint meetings of interest to all members.
- ICSA Labs has industry consortia and news at <http://www.icsalabs.com/index.shtml>
- Information Security Educators List (SECEDU) <http://groups.yahoo.com/group/secedu> is an informal moderated list run by Dr Fred Cohen that caters to information security educators.
- Information Systems Audit and Control Association (ISACA) <http://www.isaca.org/> “sponsors international conferences, administers the globally respected CISA® (Certified Information Systems Auditor™) designation earned by more than 24,000 professionals worldwide, and develops globally-applicable Information Systems (IS) Auditing and Control Standards.” Membership is limited to law-enforcement officials and security professionals.

- Information Systems Security Association (ISSA) <http://www.issa.org/> has chapters all over the world and “provides education forums, publications and peer interaction opportunities that enhance the knowledge, skill and professional growth of its members.” MK is an active member of the ISSA Northeast Chapter centered in the Boston area and very much appreciates *The Password – The Only Password You Should Share* publication and the excellent lectures presented monthly. ISSA also hosts an annual conference.
- Information Warfare <http://www.infowar.com/> has an extensive range of articles on information security topics.
- Institute for Certification of Computer Professionals (ICCP), www.iccp.org
- Institute of Internal Auditors (IIA) <http://www.theiia.org/> is active in all aspects of internal auditing including information security audit practices. The IIA sponsors conferences, works with academia to encourage and support the development and implementation of internal auditing courses and curricula, and manages the CIA (Certified Internal Auditor) professional designation.
- Institute for Security Technology Studies (ISTS) at Dartmouth College <http://www.ists.dartmouth.edu/>
- International Federation for Information Processing (IFIP) Special Interest Group on Security and Protection in Information Processing Systems (TC11) has a home page at <http://www.ifip.tu-graz.ac.at/TC11/index.html> and will be of particular interest to European security specialists.
- International Information Systems Security Certification Consortium (ISC)2, www.isc2.org
- International Systems Security Engineering Association (ISSEA) <http://www.issea.org/> is a specialized group “focused on the adoption of systems security engineering as a defined and measurable discipline. The ISSEA's initial focus is the achievement of an ISO standard to guide and improve the practice of systems security engineering. The ISSEA will accomplish this through its oversight of the Systems Security Engineering Capability Maturity Model (SSE-CMM) Support Organization (SSO).”
- National Institute of Standards and Technology NIST
- NSF Trusted Computing program
- Security Center from Internet Security Systems, although a commercial organization, has good security resources and news at http://www.iss.net/security_center/
- Sicherheit in Rechner Netzen (SIRENE) <http://www.semper.org/sirene/> is “a loosely collaborating group of researchers from different organizations” in Finland, Germany and Switzerland who “share an interest in security and privacy.” They publish technical papers in

electronic commerce, medicine, mobile communication, theoretical cryptology and distributed systems.

- Software & Information Industry Association (SIIA) has material relating to software theft and related matters at <http://www.siiia.net/>
- System Administration, Networking and Security Institute (SANS), www.sans.org/newlook/home.php

Appendix 6. Short List of Useful INFOSEC Conferences

- The Annual Computer Security Applications Conference (ACSAC) <http://www.acsac.org/> is organized by The Applied Computer Security Associates (ACSA) and the Association for Computing Machinery (ACM) Special Interest Group – Security, Audit and Control (SIGSAC). This small conference appeals to security experts at a high level; the next one is in New Orleans in December 2001.
- The Computer Security Institute (CSI) is famous for the quality of its conferences. See <http://www.gocsi.com/> for general information and http://www.gocsi.com/#netsec_01 for details of its upcoming NetSec Conference in June in New Orleans, LA.
- In Europe, the European Institute for Computer Antivirus Research (EICAR) has good conferences; see <http://conference.eicar.org/> for news on the next conference, which will be in Berlin in the summer of 2002.
- The MIS Training Institute <http://www.misti.com> has many security conferences; see <http://www.misti.com/conference.asp> for a list of over a dozen conferences all over the world (e.g., Boston, Brussels, Chicago, Dallas, Dublin, Hong Kong, Jeddah, London, Orlando, Washington DC).
- RSA Data Security Inc. has a highly respected conference every year; see <http://www.rsaconference.com/rsa2001/> for details of the April 2001 conference in San Francisco and check the extensive list of other interesting possibilities on RSA's event listing at <http://www.rsasecurity.com/events/>
- SANS has many conferences, international, national and regional: see <http://www.sans.org/newlook/home.htm> for a list of around a dozen upcoming conferences. These conferences have a wealth of courses and lectures for people interested in security – from beginners to experts.

An extensive list of upcoming security events is at <http://www.cs.utah.edu/flux/cipher/cipher-hypercalendar.html> and there's another list that includes many *Call for Participation* pages at <http://www.cerias.purdue.edu/hotlist/detail.php?arg1=410&arg2=Events+%26+Call+For+Papers+/%2BPresent>

Appendix 7. Some Major INFOSEC Academic Programs in the USA.

The asterisks (*) in the list below indicate *Centers Of Academic Excellence In Information Assurance Education* designated by the US National Security Agency (NSA); see <http://www.nsa.gov/isso/programs/coeiae/index.htm> for details of the National INFOSEC Education and Training Program (NIETP).

- Carnegie Mellon University* in Pittsburgh, PA is home to the Software Engineering Institute (SEI) <http://www.sei.cmu.edu/> and the Computer Emergency Response Team Coordination Center (CERT-CC) <http://www.cert.org>
- Capitol College in Laurel, MD runs the Master of Science in Network Security (MSNS); see <http://www.capitol-college.edu/academics/grad/msns.html> for details.
- Dartmouth College in Hanover, NH has a new Institute for Security Technology Studies <http://www.ists.dartmouth.edu/> that focuses on “cyber-security and information infrastructure protection research [and] counter-terrorism technology research, development and assessment.”
- Eastern Michigan University (EMU) <http://www.emich.edu/> in Ypsilanti (Lower Peninsula), MI offers an undergraduate track that lends itself towards specialization in INFOSec; for details of the Graduate *INFOSec* Certificate Program see <http://www.emich.edu/public/bted/infosec.html>
- Florida State University* <http://www.fsu.edu/> in Tallahassee, FL has a new Information Technology Assurance and Security initiative <http://www.cs.fsu.edu/infosec.html> focusing on software reliability, information assurance, and computer and communications security.
- George Mason* University (GMU) in Fairfax, VA offers an academic / commercial certification program related to the CISSP (Certified Information Systems Security Professional) certification managed by the International Information Systems Security Certification Consortium (ISC)². This certification track is available within the Masters & PhD programs. GMU offers a virtual tour of their Center For Secure Information Systems (CSIS) <http://www.isse.gmu.edu/~csis/>.
- George Washington University (GWU) in Washington, DC has graduate INFOSEC programs in its School of Engineering and Applied Sciences (SEAS). The list of programs at <http://www.seas.gwu.edu/~seaswww/v5.0/admission/handbook/graddegrees.html> shows D.Sc. Programs specialize in such areas as information assurance, crisis/emergency/risk management, reliability, quality control, and risk analysis.
- Georgia Tech College of Computing <http://www.cc.gatech.edu/> in Atlanta, GA announced a new Master's degree in Information Security in February 2002. See < http://www.cc.gatech.edu/external.affairs/ms_infosec.html > for the press release.

- Idaho State University* <http://www.isu.edu> in Pocatello, ID has a Center of Excellence <http://security.isu.edu/> in operation.
- Information Resources Management College* <http://www.ndu.edu/irmc/> at the National Defense University <http://www.ndu.edu/> in Washington DC is a Center of Excellence.
- Iowa State University* <http://www.iastate.edu/> in Ames, IA has an Information Assurance program that was authorized in November 2000; for a brief article about the project, see <http://www.ait.iastate.edu/newsletter/200012200112/article15.html>
- James Madison University* <http://www.infosec.jmu.edu/> in Harrisonburg VA has a Master's program in INFOSEC that uses on-line distance learning.
- Norwich University* offers an 18-month online Master of Science degree in Information Assurance (MSIA) that starts every September and January. See <http://www3.norwich.edu/msia> for a link to the program.
- Purdue University* <http://www.cs.purdue.edu/> West Lafayette, IN has excellent undergraduate and graduate programs and research opportunities. Many students from the programs have been awarded high salaries and positions after graduation.
- Stanford University* <http://www.stanford.edu/group/tdr-security/> in Palo Alto, CA has a detailed calendar listing about its B.Sc., M.Sc. and Ph.D. programs in computer sciences, with courses in security and security-related topics. Download the PDF file from <http://www.stanford.edu/dept/registrar/bulletin/pdf/CompSci.pdf>
- University of California at Davis* <http://seclab.cs.ucdavis.edu/> has programs emphasizing identification and authentication research, and research and development in cryptology, cryptanalysis and public-key infrastructure.
- University of Idaho* <http://www.uidaho.edu/> in Moscow, ID has a Certificate of Completion in Secure & Dependable Computing Systems; see <http://www.uidaho.edu/evo/newhtml/sccrdis.htm> for details.
- University of Illinois at Urbana-Champaign* <http://www.uiuc.edu/> has a Center of Excellence which is described at <http://ciae.cs.uiuc.edu>
- University of Tulsa* (OK) <http://www.utulsa.edu/> has graduate programs in computer science with concentration in security; see <http://euler.mcs.utulsa.edu/grad.cs.courses.html> for details.

Appendix 8. Some INFOSEC Academic Programs Outside the USA.

- Algonquin College (a community college, not a university) in Ottawa, Canada has a one-year full-time program for a certificate in information security
http://www.algonquinc.on.ca/acad_menus/current/0445X1FWO.html#ProgramDescription
- At Cambridge University in England, the main research facility for security is the Center For Communications Systems Research (CCSR) <http://www.ccsr.cam.ac.uk/> is famous for its longstanding, world-caliber quality of research. In 1997, Bill Gates gave Cambridge \$70M to build a research center in computer science; however, only citizens of the European Union can receive financial support from the University. They have no scholarships, financial aid, or grants for non-European students.
- Georgian College (also a community college) in Barrie, Ontario has a 48-week residency program leading to a post-graduate diploma in cyberspace security
http://georgianc.on.ca/calendar/programs/cyberspace_security.htm
- University of Hamburg <http://www.informatik.uni-hamburg.de/> (in German) or http://www.informatik.uni-hamburg.de/welcome_eng.html (in English) is home to the Virus Test Center <http://agn-www.informatik.uni-hamburg.de/vtc/naveng.htm> under the direction of Prof. Klaus Brunnstein.
- University of Leicester's Scarman Center in England has a wide range of residential and distance learning programs relating to criminology and security-related subjects and leading to certificates, undergraduate degrees and graduate degrees. See a complete list at <http://www.le.ac.uk/scarman/teach/courses.html>
- Queensland University Of Technology (QUT) in Brisbane, Australia has an Information Security Research Centre <http://www.isrc.qut.edu.au/> with strong ties to the AUSCERT (Australian Computer Emergency Response Team).

Appendix 9. Some Useful INFOSEC Publications.

Some paper publications are listed below:

- *Computer Security Alert* (monthly) and *Computer Security Journal* (quarterly). Both are benefits of membership in the Computer Security Institute) <http://www.gocsi.com> and <http://www.gocsi.com/excerpt.htm> (editorial archives)
- *INFOSECURITY News Magazine* (free) <http://www.scmagazine.com>
- *Information Security Magazine* (free) <http://www.infosecuritymag.com/>
- *SC Information Systems Security* (\$175/year for six issues) Auerbach Publications <http://www.auerbach-publications.com/contents/issad.htm>

Some useful electronic publications that cover information security news which you can receive by e-mail (free unless otherwise noted) include the following (pointers to subscription information are given wherever possible):

- ACM TechNews includes security news as well as general information industry news (thrice weekly; free to ACM members) <http://www.acm.org/technews/>
- Benton Project Communications-related Headlines (daily) <http://www.benton.org/News/>
- Bugtraq (see subscription form in frame on) <http://www.securityfocus.com/>
- CERT-CC *Advisories* and *Summaries* http://www.cert.org/contact_cert/certmaillist.html
- *EDUPAGE* <http://listserv.educause.edu/cgi-bin/wa.exe?SUBED1=edupage&A=1>
- FindLaw's *DOWNLOAD THIS! A Weekly Newsletter Covering Law and the Internet* <http://my.findlaw.com>
- *Help Net Security* (weekly) <http://www.net-security.org/text/newsletter/>
- Network World Fusion's Security Newsletter (twice weekly tutorials and articles by MK) <http://www.nwfusion.com/newsletters/sec/>
- NewsScan publishes an excellent daily news summary that often includes security news. <http://www.newsscan.com>
- Pete Moss Publications -- newsletters about Spam, Security, MP3, E-Commerce, Privacy, Viruses and Censorship <http://petemoss.com/>
- *POLITECH* (daily) moderated by Declan McCullagh <http://www.politechbot.com/info/subscribe.html>

- *RISKS Forum Digest* (irregular) moderated by Peter G. Neumann
<http://www.CSL.sri.com/risksinfo.html>
- *SANS NewsBites* <mailto:sans@sans.org> with the subject: Subscribe NewsBites
- SearchSecurity Newsletter (daily)
http://searchsecurity.techtarget.com/searchSecurity_Member_Benefits_Page/0,282323,1,00.html
- *Security Intelligence News Service* (weekly) <http://dso.com/cgi-bin/dsoindex.cgi/?cartid=983070559&next=newsletter.html>
- *Security Wire Digest* (twice weekly) from Information Security Magazine
<http://infosecuritymag.industryemail.com>

As for finding further information about information security, I suggest the following Web sites as good starting points (in addition to several of the sites mentioned above, which have daily news updates online):

- CERIAS Hotlist <http://www.cerias.purdue.edu/hotlist/>
- ICAT Metabase (search engine for CVE -- Common Vulnerabilities and Exposures -- Database) <http://icat.nist.gov/icat.taf>
- ICSA Labs / Trusecure Corporation's *Hype or Hot* index
<http://www.trusecure.com/html/tspub/hypeorhot/index.shtml>
- Information Security Resources <http://security.isu.edu/>
- InfoSec and InfoWar Portal <http://www.infowar.com/>
- INFOSYSSEC, an extensive collection of security links, news and search engines
<http://www.infosyssec.com/infosyssec/index.html>
- International Computer Security Laws <http://www.mossbyrett.of.no/info/legal.html>
- Network/Computer Security Technology <http://jotruitt.home.mindspring.com/sectech/>
- Security and Cryptography links <http://www.semper.org/sirene/outsideworld/security.html>
- SecurityFocus <http://www.securityfocus.com/>
- TechRepublic configurable Web pages (browse by topic or sign up using link on)
<http://www.techrepublic.com>

Appendix 10. Certifications in INFOSEC.

- CCP (Certified Computing Professional with specialty including Systems Security) from the Institute for Certification of Computer Professionals (ICCP) <http://www.iccp.org>
- CDRP (Certified Disaster Recovery Planner) from the Disaster Recovery Institute International (DRII) <http://www.drii.org>
- CFE (Certified Fraud Examiner) from the Association of Certified Fraud Examiners (ACFE) <http://www.acfe.org>
- CIA (Certified Internal Auditor) from the Institute of Internal Auditors (IIA) <http://www.theiaa.org>
- CISA (Certified Information Systems Auditor) from the Information Systems Audit & Control Association (ISACA) <http://www.isaca.org>
- CISSP (Certified Information Systems Security Professional) from the International Information Systems Security Certification Consortium (ISC)²; Web site <http://www.isc2.org>
- CPP (Certified Protection Professional) from the American Society for Industrial Security (ASIS) www.asisonline.org
- GIAC (Global Information Assurance Certification) from the System Administration, Networking and Security Institute (SANS) <http://www.sans.org/newlook/home.php>; certification Web site <http://www.giac.org/>
- ISS (Graduate Certificate Program In Information Systems Security) <http://www.isse.gmu.edu/~csis/isscert.html> from George Mason University in Fairfax, Virginia. The ISS is offered through GMU's School of Information Technology & Engineering (SITE) and its research center CSIS. This certificate may be pursued concurrently with any of the graduate programs available at SITE.
- SSCP (Systems Security Certified Practitioner) from (ISC)² is described at https://www.isc2.org/sscp_appreq.html and requires only one year of direct work experience in security.
- TISPC (TruSecure ICSA Security Practitioner Certification) from TruSecure Corporation (www.trusecure.com) and its ICSA Labs (www.icsalabs.com); certification Web page www.trusecure.com/html/secsol/practitioner.shtml
